

SUPERTOUGH™ SUPERSAFE™ SUPERVERSATILE™

## AGRICULTURAL & EQUINE

Maintaining a stable yard, farm or estate, no matter the size, is a continuous job for its staff and owners. JCB's 1 TOUGH PAINT offers a very quick, resilient and long-lasting paint to defend your buildings from wear and tear and of course the ever-changing weather.

Its SUPERTOUGH™ qualities mean it can be used inside and out, on barns, stables, silos, milking parlours and general farm buildings.

The paint's formulation makes it tremendously hardwearing; it repels moisture from rain, sleet or snow yet still allows the building to breathe.

Painting the outside of a building with JCB Paint, it will not be affected by the wind and pollutants in the air; nor will facades be damaged by sunlight, ensuring your roofs, walls and doors retain their colour across the seasons.

Internally this paint can help maintain a clean, dry and more hygienic environment.

In buildings that house animals they require constant attention removing dirt, manure etc walls painted with JCB Paint can be washed, scrubbed, even steam cleaned repeatedly, and it will not damage the integrity of the surface.

It is also water resistant meaning the surfaces of areas with lots of condensation will not absorb the liquid, and the built-in fungicide prevents mildew, algae or mould.

One of the more appealing and most important benefits to this paint is its SUPERSAFE™ features.

With so many flammable substances in use throughout the agriculture and equine community, fire safety is of paramount importance.

JCB Paint has produced a specific flame-retardant compound, which in the event of a fire, materials painted with the product will start to expel moisture as they heat up, prohibiting it from spreading.

SUPERTOUGH™ SUPERSAFE™ SUPERVERSATILE™

It will also vastly reduce the production of smoke, what little there is, will be white, non-toxic and safe for humans and animals.

Both behaviours will provide valuable, extra time to evacuate your location.

The paint has been independently tested to ensure it meets fire safety standards stipulated in the government's 2000 Buildings Regulations document for both dwelling and non-dwelling buildings.

To meet these criteria, JCB Paint has gained certification for BS 476: Part 6:1989+A1: 2009, BS 476 Part 7:1997 and EN ISO 13501-1:2007+A1: 2009.

In addition to this, the paint also has ISO 22196:2011 accreditation as it contains an active silver chloride ingredient which gives it antimicrobial protection; surfaces painted with this paint will be 99% resistant to bacteria such as MRSA, MSSA and E. coli. etc.

Owners of horses will be very familiar with the contagious nature of Strangles and how difficult it can be to diagnose carriers.

As part of the paint's anti-bacteria examination, it underwent analysis for *Streptococcus equi equi*; test results confirmed JCB Paint was 98% resistant to the disease.

You can rest assured that not only will this paint reduce the risk of Strangles contamination, but it will also minimise the spread of many other viruses.

This paint is also water-based and non-solvent; it uses the highest quality ingredients and has purposely been created to ensure animals will not get unwell if they ingest it.

It does not contain any heavy metals, formaldehyde and other hazardous chemicals, meaning the VOC content is extremely low, making it safe for people and the environment.

JCB Paint affords excellent retention on virtually any surface making it SUPERVERSATILE™, on most materials one coat is all you need to improve the aesthetics and start protecting them.

SUPERTOUGH™ SUPERSAFE™ SUPERVERSATILE™

It is widely available in the four most common colours – black, grey, white and magnolia; however, if you are after a dark brown or red or prefer a subtler hue like light blue and green, we can custom mix these to your specification.

If you want to use adaptable, non-toxic, strong performing paint which can minimise the risk of a fire and the spread of disease; JCB Paint has the complete solution for you and your premises.

It is available across the UK, through agricultural suppliers, country stores and tack shops.
